

Show your love for carrying sustainable packaging by promoting a full line up of Bay Area Herbs.

Earth Day is April 22nd.

- Packaging is an opportunity to provide products that demonstrate shared values with a positive impact on people and the planet.
- 50% of the world's plastic packaging can see economic opportunity even after its initial use, which works out globally to \$2-3 billion.
- Up to 65% of consumers prefer companies that take stands on social and environmental issues*

SUSTAINABLE PACKAGING COLLECTION

Completely Compostable!

FEATURES + BENEFITS:

Plant-Based (99%)

Corn-based 100% bio-sourced plastic PLA. Just 1% of material additive for added strength boost.

Recycled Content (up to 35%)

Highly rigid, dense, and transparent (compared to PET). Resists temperatures up to 450° F/133° C.

Post-industrial recycled material is used in the PLA formulations thanks to closed-loop processes between the manufacturer's facilities. Don't worry, this doesn't change your overall plant-based content.

Certified Compostable

Tested according to ASTM D6400 to ensure it will break down within 180 days in an industrial compost facility. The PLA is certified by BPI and meets California Legislation for communicating compostability to consumers.

No Chemicals of Concern

Extra care is taken to ensure packaging performs without any BPAs, phthalates or other chemicals of concern as found in California's Proposition 65 list of harmful chemicals.
